

# Management Services

**Management Fee: \$0.005 kWh**

**Contract Term: 1-5 years**

**Min Fleet: 300 ASIC units**

We offer remote and on-site management services for your mining fleet.

Each miner is individually tuned to deliver maximum hashrate with the lowest watt consumption.

Automatic profile switching allows us to run miners no matter the ambient temps, without mining interruption due to overheating and full chip protection.

All of this without any efficiency loss!

## Custom Firmware

Enjoy 5-9% better efficiency, lowering your power bill.

Heat mitigation is done through multiple power profile settings, eliminating overheating and downtime.

## Low Power Mode

Efficiency is improved through custom power settings.

By slowing down mining hashrate, we're able to achieve better power efficiency.

Very crucial for older miners while BTC price fluctuates.

## In-House Software Automation

Automated Demand Response Events as well as forecasting future events with precise miner response.

## Miner Efficiency Optimization

Miners are updated and tested regularly for optimal target chip temp, profile switching and fan speeds.
